Improvements in and relating to a user interface for a radiotelephone

Improvements in and Relating to a User Interface for a Radiotelephone

11
A11

A user interface for a radiotelephone 1 is described in which the user is able to select components from a variety of sources including multimedia sources and the Internet. The user is then able to combine the components in a message and furthermore edit them to add expression to the message and to set delivery conditions for the message. The message may be archived for later use or immediately sent to a third party either separately or as an attachment to another file.
